1. This action is in response to the revival approved on 5/20/08.
2. Response to applicant's arguments: On page 10, the applicant stated: "Thus, a repertory is initially void and a first repertory Rd is progressively constructed in real time. In contrast, in Cohen a predetermined number of gestures are identified and the different types of gestures are divided in different lines. Cohen provides an initial repertory which is not void and is progressively constructed in real time." The examiner agrees and withdraws rejections; an updated search shows there is no suggestions and motivation teaching such feature.
3. Reason for allowance:
Claims 1-16 are allowable. The following is an examiner's statement of reasons for allowance:

With regards to claim 1, the examiner cannot find any motivation and suggestions disclosing extracting features from said delta image for obtaining a potential dynamic patch which is compared with dynamic patches previously recorded in a first repertory which is progressively constructed in real time from an initial void repertory in combination with the rest of the limitations of claim 1.

With regards to claim 5, the examiner cannot find any applicable prior art and/or suggestions disclosing stable sets of active dynamic patches representing a characterization of a reoccurring movement have been detected, the center of the movement is identified and static patches which are at a predetermined distance d from

Art Unit: 2624

the movement center and are obtained by a process of static pattern recognition are analyzed to constitute at a given timestep a set of active static patches S_i which are stored in a second repertory, and wherein the process of static pattern recognition and production of static patches is initiated at the same time as the process of dynamic movement recognition and production of dynamic patches and when stable sets of active dynamic patches representing a characterization of a reoccurring movement have been detected, the process of static pattern recognition is continued exclusively with static patches which are located in a restricted area of the image which is centered on said identified movement center in combination with the rest of the limitations of claim 5.

With regards to claim 15, see the rationale for claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
